① $-12 + (-33)$ Using both 1's & 2's Complement method using 8-bit

Q1 $-12 \Rightarrow 11110011 \rightarrow$ 1's Complement
 $\quad \quad \quad \hookrightarrow 11110100 \rightarrow$ 2's Complement

$-33 \rightarrow 11011110 \rightarrow$ 1's Complement
 $\quad \quad \quad \hookrightarrow 11011111 \rightarrow$ 2's Complement

1's Complement

$$\begin{array}{r}
 11110011 \\
 + 11011110 \\
 \hline
 \textcircled{1}11010001 \\
 \downarrow \\
 11010010
 \end{array}$$

Final - - (1's Complement of $(11010010)_2$)

$$\Rightarrow - (00101101)_2$$

2's Complement

$$\begin{array}{r}
 11110100 \\
 + 11011111 \\
 \hline
 \textcircled{1}11010011 \\
 \downarrow \text{Discard}
 \end{array}$$

Final - - (2's Complement of $(11010011)_2$)

$$\Rightarrow - (00101101)$$

$$\therefore - (00101101)_2 = -(45)_{10}$$

② $98 + (-9)$ using both 1's and 2's Complement using 8-bit

$$\begin{array}{l}
 (98)_{10} \rightarrow 01100010 \rightarrow \text{1's \& 2's Complement} \\
 (-9) \rightarrow 11110110 \rightarrow \text{1's Complement} \\
 \quad \quad \quad \rightarrow 11110111 \rightarrow \text{2's Complement}
 \end{array}$$

1's Complement

$$\begin{array}{r}
 01100010 \\
 + 11110110 \\
 \hline
 \textcircled{1}01011000 \\
 \downarrow \\
 01011001
 \end{array}$$

Final \uparrow

2's Complement

$$\begin{array}{r}
 01100010 \\
 + 11110111 \\
 \hline
 \textcircled{1}01011001 \\
 \downarrow \text{Discard} \\
 \text{Final} \uparrow
 \end{array}$$

$$\therefore (01011001)_2 \Rightarrow (+89)_{10}$$
